

# TOTAL SAFETY SLOGGING WRENCHES

According to data published by the Ministry of Labor every year, **11% of all accidents are caused by tools in general (out of which 70% are caused by hand tools in particular).**

## THE MAIN CAUSES OF ACCIDENTS WHEN USING HAND TOOLS ARE:

- ▶ Cuts or blows to hand and fingers
- ▶ Eye injury caused by particles released either from the hand-tools or the objects being worked on
- ▶ Blows to different body parts due to flying tools or fallen hammer heads
- ▶ Impacts caused by tool drops

## 1- EGA MASTER HAS DEVELOPPED ANTIDROP AND ANTI-IMPACT SLOGGING WRENCHES THAT:

- ▶ To minimize such incidents, EGA MASTER has developed a new type of slogging wrench that eliminates hand and finger injuries and is safe to use when working at heights.
- ▶ The Total Safety Slogging Wrench includes a safety o-ring that wraps around the nut, increasing the friction and minimizing any looseness between the wrench and the nut. As a result, the wrench can be operated without the need of using any hand to hold it in place, therefore eliminating any probability of injury.
- ▶ In addition to the safety benefits, the wrench enables operational cost efficiencies to be achieved by reducing the number of people required to perform certain jobs (one person instead of two).

**2-** In addition to the o-ring, the wrench includes a removable shackle that allows the wrench to be secured through a safety lanyard, making it safe to be used at heights.

**3-** The o-ring is easily replaceable and supports temperatures up to 100°C. Replacements are available for each wrench.
